

3D-Side announces agreement with Smith+Nephew for the launch of their TOTAL ANKLE Interactive Software platform

“After gaining the 510(k) in August 2022 for our Ankle Arthroplasty Pre-Operative Planning Software, *Customize*, we are very proud to announce an agreement with Smith+Nephew and the commercial launch of their platform TOTAL ANKLE Interactive Software.

TOTAL ANKLE Interactive Software is a dedicated web-platform using all the functionalities offered by *Customize* and compatible with surgical techniques for the CADENCE Total Ankle System and the SALTO TALARIS Total Ankle Prosthesis. The platform enables physicians to upload CT and X-RAY scans of their patients and receive a 3D pre-operative plan of the reconstruction of the pathological ankles. Based on the pre-operative planning, the physicians can optimally position and size the talar and tibial components, adjust boney positioning and alignment, and assess impact to anatomical structures or existing hardware.

3D-Side is specialized in customization, both in software and in its cutting guides. Each patient is unique, and each treatment must be adapted to this uniqueness.

Our agreement with Smith+Nephew will enable us to support physicians and patients that will benefit from a customized solution in the treatment of ankle pathologies. Making life better through our solutions is at the heart of everything we do.

3D-Side is excited and ready to help the first patients that will soon be introduced in the TOTAL ANKLE Interactive Software!”
