

GMREIS Expands Upper Limb Trauma Portfolio with Two New FDA 510(k) Clearances

March 5, 2025 - GMREIS has achieved a significant milestone with FDA 510(k) clearance for two innovative solutions in upper limb fracture management, reinforcing its commitment to delivering advanced surgical solutions.

Upper Limb Versalock Plating System

The Upper Limb Versalock Plating System is a comprehensive fixation solution designed for fractures of the clavicle, scapula, proximal and distal humerus, proximal ulna, and olecranon. This system offers:

- Variable locking mechanism for enhanced fixation stability
- Low-profile design with rounded edges to minimize soft tissue irritation
- Extra-long plates to accommodate complex fractures
- A complete plating system for upper limb trauma

Expert – Flexible Fixation Plate Coracoid

The Expert – Flexible Fixation Plate Coracoid is specifically designed for AC joint injuries associated with clavicle fractures. Key features include:

- Knotless fixation for a streamlined surgical technique
- One-shot insertion, as the device comes pre-attached to its handle
- Specially designed bottom that interfaces with the clavicle's auto compression holes, ensuring optimal fixation while preventing tissue irritation or other damage

With these two new FDA clearances, GMREIS expands its portfolio, offering a more complete range of solutions for upper limb fracture management.
